Administration, Division of Biology & Medicine

RADIATION INJURY INCIDENTS

SYMBOL: BMA:RDO

Reference is made to your memorandum of August 9, 1956, wherein you requested our review of a list of injuries resulting from radiation, which had been prepared in answer to a request from the JCAE.

We have reviewed the list of cases and under the criteria you have listed in your memorandum we do not know of any other cases which should be included. It occurred to us that possibly some radiation cataract cases would maybe be included in such a list, but after checking with NYOO (Mr. Solon) it does not appear that there are any such cases which have occurred under the Commission's programs.

It might be well to point out to the JCAE that this list, of course, does not include injuries to Marshall Island natives and to Japanese fishermen following test activities in the Pacific in March of 1954. Those two incidents were reported to the JCAE in 1954.
